

New and advanced web tool developments

Logging in

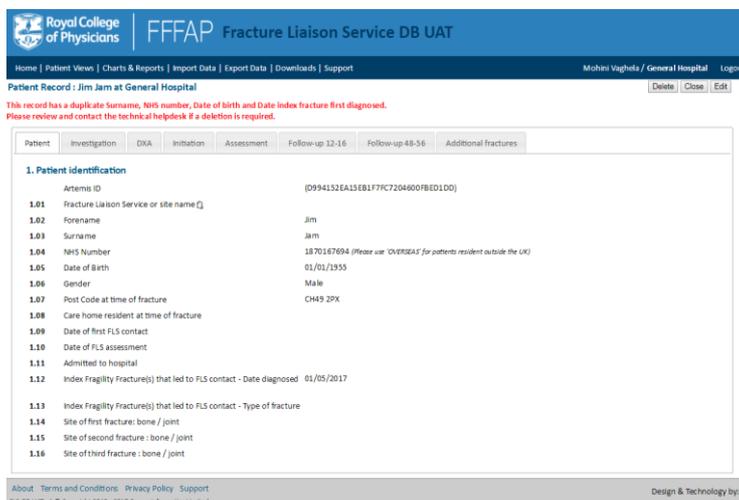

Always log in via www.fffap.org and bookmark this site. This will direct you to the least busy server.

You don't need to enter you full webtool account user name (eg John Smith/ORG/NCASP) when logging you can just enter your name (eg John Smith) or your email address and then click on password.

Duplicate records warning

The database now warns you when you are about to make a duplicate. If you click 'ok' the record will be created if you click 'cancel' you can go back and edit the record.

Patient	Investigation	DXA	Initiation	Assessment	Follow-up 12-16	Follow-up 48-56	Additional fractures
1. Patient identification							
Artemis ID	(D994152EA15EB1F7FC7204600F8ED1DD)						
1.01	Fracture Liaison Service or site name						
1.02	Forename	Jim					
1.03	Surname	Jam					
1.04	NHS Number	1870167694 (Please use 'DN/REGAS' for patients resident outside the UK)					
1.05	Date of Birth	01/01/1955					
1.06	Gender	Male					
1.07	Post Code at time of fracture	CH49 3PX					
1.08	Care home resident at time of fracture						
1.09	Date of first FLS contact						
1.10	Date of FLS assessment						
1.11	Admitted to hospital						
1.12	Index Fragility Fracture(s) that led to FLS contact - Date diagnosed	01/05/2017					
1.13	Index Fragility Fracture(s) that led to FLS contact - Type of fracture						
1.14	Site of first fracture : bone / joint						
1.15	Site of second fracture : bone / joint						
1.16	Site of third fracture : bone / joint

Possible duplicates view and deletion function

There is a possible duplicates view. This is generated by a background program that checks for duplicates every 15 minutes.

There is now a view which will flag possible duplicate cases. This can be accessed by clicking on 'patient view' and then 'possible duplicates.'

If you have duplicate records for the same patient or you have records that should not be part of the audit, you can now delete them without contacting the FLS-DB helpdesk.

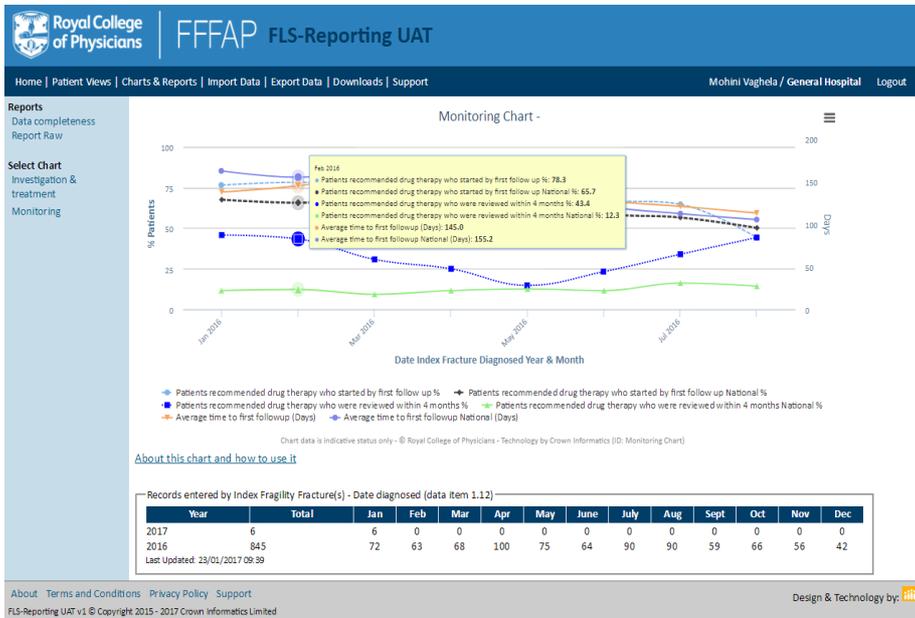

- Below is a screenshot of a fictional patient. The deletion function is on the top right hand side.
- If you have entered a duplicate patient, select delete. When you select delete you will be asked to confirm the reason. Select duplicate from the drop down box and select confirm – yes. Then select delete again.
- Once the record has been deleted, close the record. The record will move to the delete patient view. Records will remain in this view for 30 days

The screenshot displays the FLS-DB UAT interface. At the top, there is a navigation bar with the Royal College of Physicians logo and the text 'FFFAP Fracture Liaison Service DB UAT'. Below this is a menu with options like 'Home', 'Patient Views', 'Charts & Reports', 'Import Data', 'Export Data', 'Downloads', and 'Support'. The user is logged in as 'Catherine Gallagher / General Hospital'. The main content area shows a 'Patient Record : Fake Patient at General Hospital' with a 'Delete' button on the top right. The patient record is displayed in a table format with columns for 'Patient', 'Investigation', 'DXA', 'Initiation', 'Assessment', 'Follow-up 12-16', 'Follow-up 48-56', and 'Additional fractures'. The 'Patient' column is expanded to show '1. Patient identification' with fields for 'Artemis ID', 'Fracture Liaison Service or site name', 'Forename', 'Surname', 'NHS Number', 'Date of Birth', 'Gender', 'Post Code at time of fracture', 'Care home resident at time of fracture', 'Date of first FLS contact', 'Date of FLS assessment', 'Admitted to hospital', 'Index Fragility Fracture(s) that led to FLS contact - Date diagnosed', 'Index Fragility Fracture(s) that led to FLS contact - Type of fracture', 'Site of first fracture: bone / joint', 'Site of second fracture: bone / joint', and 'Site of third fracture: bone / joint'. A 'Delete Record' dialog box is open over the patient record, asking to 'Delete this record' and providing a 'Reason' dropdown menu with options: 'Duplicate', 'Not an FLS patient', 'Patients age less than 60', 'Test record', and 'Other'. The 'Delete' button is highlighted in the dialog box.

Charts and reports

Run charts

- The run charts are updated every six hours.
- Each line toggles on and off.
- You can click and drag and zoom in on a particular time.

- Click on the 'hamburger' and you can export the runchart as a jpeg, pdf etc.

Importing Data

- If you collect data on local systems this can be import this will avoid double entry of patients.
- You import your data on a CSV file. This will contain one line for each record. Each data item is split by a comma.
- In the download section there is a document called 'import data set'. This is the CSV instruction

FLS Import Dataset
V1.2.xlsx

- It is best to get your IT department or IT provider to create a CSV file with the same format as the 'import data set' file.
- It can take up to 15 minutes for the data to be imported.
- When the data is imported a log will be created.
- If you click on the log you will be presented with a report. This report will show you information on fatal error, serious errors and warnings. The report will also show you where in your report the error is.
- You can upload data then go to your patients view and then edit/update the data.
- You can correct any errors identified and then re upload the data.

FLS-DB UAT v1 © Copyright 2015 - 2017 Crown Informatics Limited

Design & Technology by:

- There is a test system where you can practice uploading CSV files. [Contact Crown](#) if you would like access to this.

Follow Up View

- A record will appear in the 12 to 20 week patient follow up view half a week before the 12 week deadline.
- The patient's record will drop out of the view after 20 and a half weeks (whether completed or not).

- A record will appear in the 48 to 56 week view half a week before the 48 week deadline (whether completed or not).
- The patient's record will drop out of the view after 56 and a half weeks.
- The record will also drop out for 12 to 20 weeks and 49 to 56 weeks if the follow up tab is filled in.

Export data

- You can export all your data for specified dates.
- The data exports in the same format as the CSV file for uploading.

The screenshot shows the 'Export Data' page of the FFFAP Fracture Liaison Service DB UAT. The page header includes the Royal College of Physicians logo and the text 'FFFAP Fracture Liaison Service DB UAT'. A navigation bar contains links for Home, Patient Views, Charts & Reports, Import Data, Export Data, Downloads, and Support. The user is identified as Mohini Vaghela / General Hospital, with a Logout link. The main content area is titled 'Export Data' and contains a form with the following elements:

- Options:** A section with a label 'Limit by date range?' and two radio buttons, 'Yes' (selected) and 'No'.
- Date Range:** A section with a label 'Search for records based on the 1.12 Index Fragility Fracture(s) that led to FLS contact - Date diagnosed'. It contains two date input fields: 'From: 01/08/2017' and 'To: 15/08/2017'. Both fields have a note '(inclusive, dd/mm/yyyy, eg: 01/02/2012)'.
- Run Export:** A button located below the date range fields.

The footer of the page contains links for 'About', 'Terms and Conditions', 'Privacy Policy', and 'Support'. It also includes the text 'FLS-DB UAT v1 © Copyright 2015 - 2017 Crown Informatics Limited' and 'Design & Technology by: iiii'.
